

# Teaching Manual for field assistants in geoscience

- An iEarth Project by Florina Schalamon -

supported by Marius Jonassen and Ragnheid Skogseth

# What is the project about?

- Fieldwork adds great value to a course
- How to make most of this learning activity?
  - Be prepared (as student, course responsible, assistant)

- Help for field assistants  
→ goal is to write a teaching manual
- Strengthen competence in the field for teachers
- Involve students in co-creating learning material
- Documenting/developing field learning methods

# How to achieve the goal?

- Literature research/gathering input to outline the original idea of fieldwork as a learning activity
- Asking for feedback from former field assistants
  - Tips and tricks can be passed on
- Asking for feedback from students
  - What was helpful
  - What was missing
- Asking course leaders for their expectations

# Further outlook

- Set up a working infrastructure for feedback loops and to edit future editions
- Transfer to other universities
